Commentary³

Strong Precious Metal price momentum of prior months continued into early December with the price hitting an all-time high of \$2,135/oz. This was supported by evidence of easing inflation pressures and an accompanying shift in outlook towards steeper interest rate reductions, notably for the US. This came alongside the geopolitical tension in the Middle East following the Israel-Gaza conflict.

However, US Fed comments that rate cuts were not yet being discussed prompted a sharp retracement in the gold price. Having retreated to \$1,980/oz ahead of stronger-than-expected employment data mid-month, indicative of a more prolonged period of inflation, FOMC minutes confirming the committee's outlook that substantial rate cuts were likely in 2024. This provided support to gold prices, which closed December up 1.3% at \$2,063 for an overall 12.1% gain on the calendar year.

Silver prices traded in a wide band over the month, ranging between \$22.5/oz and \$25.75/oz, though after the spike up into the prior month's end, it closed December down 5.8% at \$23.8/oz.

In physical gold markets, central bank demand remains the primary supporting factor for prices: the latest published World Gold Council data indicated central bank net additions of 337 tonnes in the third quarter, with second-quarter purchase estimates revised upwards to 175 tonnes from 103 tonnes, a record rate of central bank additions. Selling by physically backed gold ETFs, which has previously offset central bank demand and remains an important swing factor for pricing, helpfully slowed during the month.

If higher rates persist, they may begin to drag to economic growth prospects. Should the current 10 year implied rate of 4.6% be applied across the entire US government funded liabilities (totalling \$33.7tn), it would absorb approximately \$1.5tn in debt service payments alone. The reset process will take place over the course of a number of years, with 50% of US Treasuries maturing by end-2027. Without more meaningful growth in total tax receipts, currently running at around \$4.4tn p.a., this will require incremental treasury issuance into a market already pressured by a substantially reduced appetite, notably from China which has continued to reduce its exposure during 2023.

Silver has lagged the move in gold due to the central banks' demand for gold, whilst 50% of silver demand comes from industrial uses that have seen demand soften. The silver weight has been reduced to 15%.

The Fund NAV increased 4.1% over the month, compared to a sterling return of -2% for the GDXJ equity ETF. Producers Calidus Resources and Emerald Resource, together with Canadian explorer TDG Gold, were the main contributors to performance, registering sterling share price gains of 12.8%, 8.1% and 39.2% respectively over the month. Calidus has shown operational improvement as it transitions through to positive free cashflow. The principal detractor to performance was MAG Silver whose share price declined 13.3% in sterling terms.
